Identity and Concept

- **App Name:** Adelphine Portfolio
- **Core Identity Statement:** My name is INEZAYE IWACU Adelphine.
- **Student Identity:** INEZAYE IWACU Adelphine | Registration Number: 25/27676 | INES-Ruhengeri (SWE 3409 - Mobile Application Development).
- **Intended Recipient:** Technical recruiters, internship coordinators, and innovation challenge evaluators seeking verified mobile engineering capability.
- **Visual Direction & Aesthetic Justification:** The application design deliberately diverges from standard, generic developer portfolios by adopting a sophisticated, deep burgundy palette (`#800020`). Burgundy was selected to evoke a sense of professional elegance, maturity, and creative distinction. This deliberate choice ensures the interface commands immediate attention, leaving a memorable, polished impression on recruiters while maintaining optimal readability and modern UI standards.

User Flow and Information Architecture

- **Navigation Architecture:** Built upon a streamlined bottom-tab navigation paradigm paired with dynamic structural views to minimize friction and cognitive load.
- **Core Navigation Flow:**
    1. *Home Screen:* Immediate identity verification and professional introduction.
    2. *Skills & Education:* Structured overview of technical competencies and academic timeline.
    3. *Projects Screen:* Comprehensive showcase of practical engineering deliverables.
    4. *Profile Editor Screen:* Controlled input fields with strict validation checks and persistent local saving.
    5. *About Screen:* Technical metadata, version information, data-use disclosure, and individual verification code (`MOB-A2-7676`).
- **Saved-State & Persistence Flow:** User edits made in the Profile Editor interface are validated locally and committed via asynchronous local storage (`AsyncStorage`), ensuring that modifications persist seamlessly across application restarts without relying on external cloud connectivity.

Annotated Wireframes & State Management

- **Home Screen Wireframe:** Features a centered profile avatar container styled in signature burgundy, flanked by the mandatory identity statement and a dynamic professional headline.
- **Profile Editor & Validation State:** Incorporates robust field-level validation rules:
    - *Headline validation:* Minimum length threshold enforced to guarantee descriptive professional titles.
    - *Biography validation:* Length checks to prevent incomplete narrative summaries.
    - *Error handling state:* Real-time inline feedback banners rendered in deep crimson (`#b30000`) that block invalid submissions until rectified.
- **Offline & Empty States:** Designed explicitly for zero-network environments. Core portfolio features remain fully accessible in Airplane Mode, with clear demarcation for any auxiliary data handling.

Visual and Accessibility Decisions

- **Color Psychology & Palette:** Built around a luxurious burgundy primary tone (`#800020`), clean off-white canvas backgrounds (`#fdfbfb`), and high-contrast charcoal typography (`#555555`). This configuration exceeds standard contrast ratios, ensuring effortless legibility.
- **Typography & Scalability:** Utilizes proportional font scaling and Flexbox layouts designed to adapt gracefully to increased system text sizes and narrow Android screen resolutions.
- **Accessibility Compliance:** Clear visual hierarchy, distinct touch targets for interactive elements, and unambiguous error messaging designed to accommodate users across various accessibility needs.

Implementation Comparison & Justifications

- **Wireframe-to-Execution Fidelity:** The final React Native production build mirrors the conceptual wireframes with high fidelity, maintaining consistent padding, border radiuses, and the bespoke burgundy aesthetic.

- **Design Adjustments:** Minor refinements were introduced during implementation to optimize scrolling performance inside `ScrollView` containers and enhance touch target response times on physical Android displays, ensuring an elite user experience during recruiter evaluations.
